

The Environment and Security Initiative in the Ferghana Valley

Fifth Regional meeting of Oblast Environment Protection Departments on “Environment and Security Programme” in Ferghana Valley¹

19 June 2007, Bishkek

Hotel “Dostuk”

The objectives of the meeting were 1) to *review the progress* in implementation of the regional projects within the framework of “Environment and Security programme” in the Ferghana Valley and 2) to *discuss the future* of the programme and identify priorities and issues to be addressed after 2007.

Opening remarks

In his opening statement, the Director of the State Agency for Environment Protection and Forestry **Mr Arstanbek Davletkeldiev** said that cooperation around environmental issues is helpful in establishing a climate of trust between actors. Kyrgyzstan has therefore written a country strategy document with a component on environment, in which environmental security and sustainability is an integral part.

The UNDP Resident Representative in Kyrgyzstan Mr Neal Walker underlined the necessity of cooperation at all levels to resolve the urgent environmental challenges that the countries face. He emphasised that poor water management coupled with water scarcity will potentially lead to conflict, and individual organisations have only pieces of the solutions. Hazardous waste and soil contamination and degradation were mentioned as other factors of serious concern. He was convinced that the 2nd phase of the ENVSEC programme in the Ferghana Valley would help to strengthen joint action towards environmental recovery and sustainable future of the valley.

The OCSE Ambassador to Kyrgyzstan Mr Markus Müller emphasized the need for both donors, but also partner countries in the region to commit people and money to prevent disasters and conflicts and start concrete action. He mentioned that the first phase of the ENVSEC programme in the Ferghana Valley has focused mainly on the assessment and initial steps, whereas next phases should bring concrete results on the field. The potential cost of a disaster will be manifold compared to the cost of prevention. Action needs to be taken as close to the people affected as possible, and therefore the congregation of Oblast Committee representatives was very positive. He expressed his wish that the discussion would further clarify the role of ENVSEC in the region.

¹ Not all speakers' presentations are mentioned in this report. For the full schedule, please consult the Seminar schedule in Annex 1. Almost all speakers delivered a PowerPoint presentation copies of which are available.

Presentations and discussion

Session 1. Implementation of Regional Work Programme 2005-2007

The ENVSEC National Focal Point in the Kyrgyz Republic, State Agency on Environment Protection and Forestry **Mr Omor Rustembekov** gratefully acknowledged the ENVSEC assessment report for the Ferghana Valley (2005), its participatory process, and the outcomes of the first phase of programme implementation, during which international organizations as well as donor countries, such as Italy, have provided valuable support and expertise. He stressed the importance of knowledge dissemination at the local level, among public and private sectors, among parliamentarians and chiefs of local executing authorities. International initiatives, such as ENVSEC, help establish and promote dialogue between countries and regions, particularly on environmental issues. To further strengthen the partnership and the projects, he wished that all countries in the region would participate equally.

The ENVSEC National Focal Point in the Ministry of Energy and Industry of Tajikistan **Mr Makhmadsharif Khakdodov** highlighted that, firstly, ENVSEC programme in the Ferghana Valley has been successful in improving cooperation on the local level between environmental authorities of the two countries (Tajikistan and Kyrgyzstan) through joint meetings, assessment projects and information exchange (Aarhus centers, state-of-the-environment reports, etc). He noted with regret that non-participation of Uzbekistan in projects and meetings inhibits proper coverage of issues in the Ferghana Valley. Secondly, he requested further attention of the ENVSEC Initiative to the follow-up results of the 1st phase and asked for clean-up action in the priority hotspots such as Kanibadam pesticide site (TAJ) and Kadamjai antimony tailings (KYR). Thirdly, the new regional action, particularly on climate change should be further promoted in the next phase of ENVSEC programme. Natural disaster preparedness needs to consider environmental aspects of risk management. Regional environmental monitoring networks are in a very poor state and laboratory capacity is nearly non-existent. The ENVSEC Initiative can play an essential role in capacity building for improved environmental monitoring, for data collection, information exchange and policy formulation. Finally, the presentation of the ENVSEC initiative in the Belgrade Conference of Environmental Ministers (in October) and the ISDC Meeting of Central Asian Ministers (on the 21st of June) were mentioned as important steps towards higher publicity, visibility and integration of the initiative.

Session 2. Review of regional priorities and discussion on achieved results and opportunities for programme development after 2007

Priority area 1. Transboundary industrial pollution and contamination by radiological wastes

Rapid environment and health risks assessment in hazardous waste storages – perspectives for future work

Ms Tatyana Volkova, *Project Coordinator, Rapid Environment and Health Risks Assessment (REHRA)* appealed to the ENVSEC to attract more donors to the region. The REHRA has been able to demonstrate that the health impact of the unprotected tailing dumps is real. Ms Volkova explained that in the REHRA project, project participants included central and local environmental authorities as well as administrations of the two industries (Kadamjai and Haidarkan plants). She reported on the major activities, findings and troubles of the REHRA project in Kyrgyzstan (Kadamjai and Haidarkan) and expressed the importance of integration of REHRA assessment results with Chui Laboratory's Complex Environmental Assessment for Kadamjai. Ms Volkova requested the development of a technical project (feasibility study) and co-financing of a clean-up project at Kadamjai, considering the acute and transboundary nature of the mining problem. She highlighted the need for improving analytical capacities/skills of the local environmental and encouraged Aarhus centres in the Ferghana Valley to disseminate project information/summary of the assessment results on the local level. Finally, Ms Volkova appealed to ENVSEC to apply/utilize its Balkan 'mining for closure' experience in attracting

international experts and major donors to help the region find a solution to the identified problems.

Mr Saidamin Isomiddinov, *Chairman of Sogd Committee of Natural Protection and Forestry, Tajikistan* talked about the problems facing a 1,4 ha tailing site of Kanibadam. The main concern is due to the fact that, since its establishment in 1973 until 1989, this site has been used with no planning and observation of sanitary and ecological safety requirements and has no hydro isolation and/or cover. There is also general lack of information about the dangers. The situation is further complicated by the fact that the tailing site has no owner and therefore no one is responsible for the financing. Hence there is no one to invest into the security of the place.

As Ms. Volkova, also Mr. Isomiddinov raised the issue of lack of laboratories in the vicinity. The quantity of toxins cannot be determined anywhere in the province but samples have to be sent far.

With regard to funding, Mr. Isomiddinov acknowledged that the province could apply for more funds now that Tajikistan has ratified the Stockholm Convention in April. He also mentioned that the Italian government is ready to deliver assistance. He called for a clean-up project with co-financing from local authorities, Italy, NATO SfP and GEF. The problem is that although strengthening of monitoring can be helped by funding, there have been no direct funds for a laboratory. If there were a functioning laboratory, the experience could be useful for Kyrgyzstan, too.

Preliminary dose and risk assessment of general population living in the vicinity of former uranium mining and milling sites investigated in Central Asia

Mr Peter Stegnar, *Project Co-director, NATO Project on Uranium Legacies in Ferghana Valley* presented the preliminary results of radio-ecological assessment of priority sites and explained the methodology and tools of data collection and analysis. He communicated mostly optimistic findings (exposure doses are relatively low, no acute health hazards identified, little transboundary risks). Nevertheless, on-site preventive action, especially fencing and public awareness of risks, is critical. However, when talking about risks, the perceived risk is usually higher than the actual risk. This is a factor of insufficient information, bad living conditions and emotions. As next steps, contamination pathways and water supplies need to be further assessed and reported.

Mr Viktor Novikov, *Specialist of UNEP/GRID-Arendal Centre* presented the on-going Mining Survey in Central Asia and experiences of ENVSEC in the Balkans process "mining for closure". He encouraged countries to participate in the survey and show interest in the process.

Priority area 2. Integrated Water and land resources management

Existing and planned projects

Mr Beishikeev, *World Bank Project Representative, the Kyrgyz Republic* gave a presentation on the project "Improving the Management of Water Resources". The Water Code was adopted in 2005 and there is now a special emphasis on the development of water users' associations. Publications will be produced and study tours organized to countries where water management is more developed. Mr. Beishikeev pointed out that a National Water Strategy will be developed in connection with this programme. There were already five drafts of the National Water Management paper last year. 70% of funds (19 mill. US\$) go to the South. The project is transparent at subregional levels and neighbouring countries are informed. There is close cooperation with the Chu-Talas commission and the Ili-Balkhash programme.

Mr Erkin Orolbayev, *Project consultant on Development of cooperation on Chu and Talas rivers* gave a presentation on the Chu-Talas Commission. www.talaschu.org. This is the only bilateral commission in Central Asia (KAZ, KGZ). He was hoping that the mandate of the commission would be extended and pointed out that old existing agreements can actually sometimes be an obstacle to cooperation (if they contradict current priorities). Both parties co-finance and several donors are involved. But it's difficult to assess the share the countries should pay. The Chu-Talas Commission's mandate extends only to technical and financial matters, not issues directly related to the quality of the water (pollution), for example.

Priority area 3. Natural disasters and climate change impact

All countries around the Ferghana Valley have ratified the convention on climate change.

Mr Shamil Ilyasov, *Expert of GEF/UNDP Project "Enabling activities for the preparation of the Kyrgyz Republic's Second National Communication to the UNFCCC"* stressed the importance of developing/testing regional climate change scenarios and of taking into account the local context when measuring vulnerability to climate change. He highlighted the vulnerability of water resources and glaciers to climate warming and the dramatic implications for the Ferghana Valley countries and local communities. Mr Ilyasov requested further regional action and cooperation on climate change.

Ms Nailya Mustaeva, *Senior Specialist on hydrometeorology and ecological monitoring, Hydrometeorological Agency of Tajikistan*, highlighted the global origin of the climate change problem, but its local short-term (severe weather events, floods, droughts) and long term (water deficit, glacier melting) impacts. Ms Mustaeva presented a project idea on behalf of three countries (TAJ, KYR, UZB) and proposed joint cooperative efforts on vulnerability assessment, identification of the critical districts and sectors and the necessity of joint planning of adaptation measures. She also suggested ways of promoting public awareness of climate change on the oblast level and requested the integration of climate change into planning, especially in water-energy and health sectors. Furthermore, Ms Mustaeva called for higher visibility of climate change concerns on international conferences, COPs, ISDCs.

Priority area 4. Public participation in decision-making process and access to information

Increased work effectiveness and development perspectives of Aarhus Information centres in facilitating access to information and public involvement in decision-making process

Mr Dmitrii Prudskikh, *Director of Aarhus Information Centre in Khujand* admitted that although the Aarhus Center in Khujand gave an overview of the tasks of the Aarhus Centre's tasks. Recently, the centre has tried to involve the local population by organizing a festival on ecological journalism in the Sughd region and supporting the Central Asian Eco Journalism Festival, by organizing round tables and open discussions on actual environmental problems of the region and by organizing an "Ecological Movie Week". Mr Prudskikh regretted, however, that although Aarhus Khujand has been quite successful in attracting visitors and disseminating information, there are weaknesses still, especially in the third pillar (access to justice).

Mr Saidamin Isomiddinov, *Chairman of Sogd Committee of Natural Protection and Forestry, Tajikistan* expressed a high degree of satisfaction with practical experience of the oblast level State-of-the-Environment (SoE) reporting led by UNEP and coordinated by Kyrgyzstan. He highlighted the significance of the united regional approach to environmental reporting in the Ferghana Valley and the use of common environmental indicators. He requested further capacity building activities at the local level, in particular the provision of hardware and training for regular production and update of oblast level SoEs and web resources.

Mr Viktor Novikov, *Specialist of UNEP/GRID-Arendal Centre*

Presented the structure and key topics covered by the SoE Ferghana Valley. He explained the process of SoE report preparation, responsibilities and coordination and informed the participants about the availability of SoE report on the web and relevant internet links. He welcomed proposals from oblasts and countries for further improvements of the SoE report.

Session 3. Environment and security priorities by representatives of Oblast departments

Discussion on next steps in programme development in Ferghana Valley – Partnerships between Oblast environment committees from the Kyrgyz Republic and Tajikistan

In the closing session of the meeting, **Ms Inkar Kadyrzhanova** pointed out that most of the 9 projects outlined in the regional programme for 2005-2007 were implemented or are ongoing. It was agreed that the programme will continue to develop within the existing four priority areas, namely:

- 1) Transboundary industrial pollution and radioactive waste contamination;
- 2) Integrated water and land resources management;
- 3) Impact of climate change and natural disasters hazards
- 4) Access to information and public participation in environmental decision making.

Priority area 1 – The ENVSEC programme will rely on the recommendations of the REHRA project and focus on the project sites: Kanibadam pesticide damp in Tajikistan and Kadamjai mercury factory in Kyrgyzstan. The funding may come from the NATO Public Diplomacy programme and UNDP/GEF strategic programme on persistent organic pollutants for continuation of work in Tajikistan. In Kyrgyzstan, according to the recommendations of the national experts, an environmental monitoring system aimed at pollution clean-up should be set up. This should be done jointly by a private sector company and the Agency for Environment and Forestry.

The RESCA (Radioactivity Environment Security Central Asia) project will continue working through 2008, the recommendations for follow-up will be discussed closer to the finalization stage of the project. It is important to give priority to awareness raising activities about the security risks related to hazardous pollution. Even with the limited resources available to ENVSEC partners, local small scale projects could be initiated. These could include the mounting of sign-posts, fences and barriers limiting access and passage of people to dangerous areas. Capacity building of local experts in identification and measurements of radiological pollution levels in the Southern Oblasts of Kyrgyzstan should be included into the project activities. The RESCA experience will be widely disseminated within Kyrgyzstan and Tajikistan.

Priority area 2 – The ENVSEC experience in this area is quite limited. The projects supported by the World Bank and Swiss Development Corporation provided valuable information and lessons on practical implementation of the integrated resource management principles, which will be carefully assessed and applied by the ENVSEC programme. The community level interventions are highly relevant in terms of tangible results and visible improvements in local communities' livelihoods. The plans of the countries to develop national Integrated Water Resources Management programmes could be completed by the ENVSEC through practical community based action and mobilization along the shared water courses. The experience of the establishment of the Chu-Talas river basin management commission could be applied in other settings in the region. Hitherto the experience of the Chu-Talas commission is unique in Central Asia.

Priority area 3 – The regional workshop on results of the regional project on natural disasters preparedness highlighted a need for closer cross-border cooperation between the border communities. The impact of climate change was identified as a priority but so far little was done in terms of practical adaptation and mitigation activities in the region. Public awareness raising is important also with respect to this priority area and the issue of climate change integrated into planning, especially in water-energy and health sectors.

Priority area 4 – The programme will continue strengthening the work of the Aarhus public information centres through the OSCE missions. Better information dissemination and broader inclusion of the public into the ENVSEC operations and discussions on the priority topics were highlighted as priorities in all presentations. In this respect, the work of the National Coordinators and Assistants should be strengthened. The CARESD.NET web-portal will continue serving as the depository of information and as an online tool for information dissemination through e-bulletins, news digests as well as off-line information resources.

The following were proposed as the next steps to be taken before the end of 2007:

1. **Review of the results of ENVSEC programme in Ferghana Valley in 2005-2007** – an independent review will be organized in July-September 2007 by the ENVSEC Secretariat with the involvement of the National Focal Points, UNDP and OSCE country offices/field missions.
2. **Analysis and national reviews for Kyrgyz Republic and Tajikistan** – Two review papers will be prepared by the Assistants to National Coordinators outlining the existing national programme and strategies in the area of four priorities; mapping of the existing national and regional projects and programmes supported by other donors, bi- and multilateral organizations; assessment of successes and failures of the programme over the reporting period, and recommendations for the second phase of the ENVSEC programme in the form of the mini-fiches. The ENVSEC regional desk for Central Asia will prepare a draft template for the national reviews. The national reviews will then be compiled into the regional work programme document.
3. **National and regional consultations** – The national reviews and regional compilation will be discussed in the meetings before the end of 2007 to ensure a participatory and transparent process and endorsement by the countries and the ENVSEC Management Board.
4. **Approval by ENVSEC Management and Advisory Boards** – In November, the ENVSEC will hold the management and advisory board meetings, which will discuss the regional work programme for Ferghana valley for 2008-2009. The meetings will have a special section on Central Asia and invite the representatives of the interested donors and multilaterals for fund-raising and consultation purposes.

Besides this, at the Environment for Europe conference in Belgrade a side-event on the ENVSEC programme in the Ferghana Valley will be organized. Funding from the German Environment Ministry was allocated for this purpose. A German consultant will visit the countries in July-August to collect the inputs for the side-event and identify the country representatives.

At the initiative of the Agency for Environment and Forestry of the Kyrgyz Republic, the meeting of the Interstate Sustainable Development Commission (ISDC – MKUR) was organized back-to-back with the ENVSEC regional workshops in Bishkek. Owing to this insightful timing, the ENVSEC programme was once more brought to the attention of the Ministers of Environment from five Central Asian countries. The presentation to the ISDC focused on three sub-programmes – Ferghana Valley, Eastern Caspian and Amu-Darya river basin.

The Ferghana Valley extends over Kyrgyzstan, Tajikistan and Uzbekistan and the issues and problems are interlinked and trans-boundary. Therefore, participants expressed that cooperation of all the countries of the region is crucial to the success of the projects. Many participants expressed their concern over the non-cooperation of Uzbekistan.

Furthermore, many voiced the need for further coordination – not only within the ENVSEC partners but also with other actors. According to some, coordination beyond Central Asia would be desirable. Similar programmes are being conducted in countries such as Russia and Ukraine. Others pointed out, however, that if the aims of the projects differ from those of the ENVSEC projects, coordination could become an extra burden, not a helpful tool. National Focal Points could elaborate on this further.

Annex 1: Seminar schedule

The Environment and Security Initiative in the Ferghana Valley

Fifth Regional meeting of Oblast Environment Protection Departments on “Environment and Security Programme” in Ferghana Valley 19 June, Bishkek Hotel “Dostuk”

Preliminary Meeting Agenda

The objectives of the 5th meeting of oblast representatives are:

- Review the progress in implementation of the regional projects within the framework of “Environment and Security programme” in Ferghana Valley;
- Discuss the future of the programme and identify priorities and issues to be addressed after 2007.

Co-Chairs: *Mr. Omor Rustembekov, ENVSEC National Focal Point in Kyrgyz Republic, State Agency on Environment Protection and Forestry*
Mr. Ben Slay, Director of UNDP Regional Centre for Europe and the CIS

09.00 – 09.15 Welcoming Remarks
Mr. Arstambek Davletkeldiev, Director of State Agency on Environment Protection and Forestry
Mr. Neal Walker, UNDP Resident Representative
Mr. Markus Muller, OSCE Ambassador

Session 1. Implementation of Regional Work Programme for 2005-2007

09.15 – 09.45 Overview of programme activities in 2005-2007 and expectations of the meeting participants in terms of future programme development in line with realisation of national programmes and development plans – Exchange of opinions
Mr. Omor Rustembekov, National Focal Point, Agency for Environment Protection and Forestry, Kyrgyz Republic
Mr. Makhmadsharif Khakdodov, National Focal Point, Ministry of Energy and Industry, Tajikistan

Session 2. Review of regional priorities and discussion on achieved results and opportunities for programme development after 2007

09.45 – 11.00 Priority area 1. Transboundary industrial pollution and contamination by radiological wastes

Existing and planned projects

Rapid environment and health risks assessment in hazardous waste storages -
Perspectives for future work

Presenters – *Ms. Tatyana Volkova, Project Coordinator, Rapid Environment and Health Risks Assessment*
Mr. Saidamin Isomatov, Chairman of Sogd Committee of Natural Protection and Forestry Tajikistan

Preliminary dose and risk assessment of general population living in the vicinity of former uranium mining and milling sites investigated in Central Asia

Presenters – *Mr. Peter Stegnar, Project Co-director, NATO project on Uranium Legacies in Ferghana Valley*
Mr. Baigabyl Tolongutov, National NATO Project Co-Director, Chyiskaya Ecological Laboratory

Results of survey on environment risks from mining industry and mining tailing dumps - Perspectives for future work

Presenter – *Mr. Viktor Novikov, Specialist of UNEP/GRID-Arendal Centre*

Information on transboundary environmental impact assessment, inclusion into the work programme and initiation of pilot projects

Presenter – *Ms. Tatyana Filkova, Head of Ecological Expertise Unit, Environmental Impact Assessment Project*

11.00 – 11.30 *Coffee and tea break*

11.30 – 12.45 Priority area 2. Integrated water and land resources management

Existing and planned projects

Brief introduction to the institutional development component in water resource management, World Bank Project
Project representative of the Kyrgyz Republic

Integrated land and water resources management in Kyrgyz Republic, Tajikistan and Uzbekistan in the context of sustainable development of the Ferghana Valley region

Presenter – *Mr. Nurgazy Mamataliev, National Project Coordinator of Swiss Development Corporation Project*

Information on establishment of the commission on Chu and Talas rivers between Kazakhstan and Kyrgyz Republic

Presenter – *Mr. Erkin Orolbayev, Project consultant on Development of cooperation on Chu and Talas rivers*

12.45 – 14.00 *Lunch break*

14.00 – 15.00 Priority area 3. Natural Disasters and Climate Change Impact

Existing and Planned Projects

Preparedness to natural disasters and mitigation of risk in high risk regions of Kyrgyz Republic and Tajikistan

Presenters – *Mr. Muratbek Koshoev, UNDP Advisor on Natural Disaster Management , National GEF Small Grants Programme Coordinator of the Kyrgyz Republic*
Mr. Khusrav Sharifov, Project Manager, Disaster Risk Management Project/ Tajikistan

Impact of climate change on environmental security and perspectives for joint work in the Ferghana Valley region

Presenters – *Ms. Nailya Mustaeva, Senior Specialist on hydrometeorology and ecological monitoring, Hydrometeorological Agency, Tajikistan*

15.00 – 16.00 Priority area 4. Public Participation in Decision-Making process and Access to Information

Existing and Planned Projects

Increased work effectiveness and development perspectives of Aarhus Information centers in facilitating access to information and public involvement in decision-making process

Presenters – *Ms. Kalys Khasanova, Assistant, OSCE Office in Khudjand and Mr. Kanybek Isabaev, Director of Aarhus Information Centre in Kyrgyzstan; Ms. Nazokat Yakubova, Assistant, OSCE Office in Khudjand and Mr. Dmitrii Prudskikh, Director of Aarhus Information Centre in Tajikistan*

Information and analytical support for programme implementation in Ferghana Valley and work with electronic information dissemination means – regional CARNET network and web-portal www.caresd.net

Presenter – *Mr. Vladimir Grebnev, Regional CARNET network coordinator in Central Asia*

Electronic reports on State of Environment on local level

Presenters – *Mr. Viktor Novikov, Specialist of UNEP/GRID-Arendal Centre*

Mr. Saidamin Issomidinov, Chairman of Sogd Committee of Natural Protection and Forestry

16.00 – 16.30 *Coffee and tea break*

Session 3. Environment and Security Priorities by Representatives of Oblast Departments

16.30–17.30 Experience of three years of work, challenges, lessons learnt and opportunities for the future

Presentation by Oblast Environment Committees from Kyrgyz Republic and Tajikistan
Mr. Saidamin Issomidinov, Chairman of Sogd Committee of Natural Protection and Forestry Tajikistan

17.30 – 18.00 Discussion on next steps in programme development in Ferghana Valley – Partnership between Oblast Environmental Departments, Proposals on New Priorities and Programme Development in the Future

Ms. Inkar Kadyrzhanova, Regional ENVSEC Programme Coordinator in Central Asia

Increasing effectiveness of coordination with other regional programmes

Mr. Omor Rustembekov, National Focal Point, Agency for Environment Protection and Forestry, Kyrgyz Republic

18.00 – 18.30 Wrapping up the Meeting by **Mr. Ben SLAY**

19.00 *Dinner*

Annex 2: List of Participants

Программа по Окружающей Среде и Безопасности в Ферганской Долине *The Environment and Security Initiative in the Ferghana Valley*

Пятая региональная встреча областных комитетов по охране окружающей среды из Кыргызстана и Таджикистана

Fifth Regional meeting of Oblast Environment Protection Departments from Kyrgyzstan and Tajikistan

Бишкек, Кыргызстан 19 июня 2007 года
Bishkek, Kyrgyzstan, June 19, 2007
